

What Are Facts about Osteoporosis?

by NEWLIFEOUTLOOK TEAM

A Quick Glance at the Facts, Symptoms, and Treatments for Osteoporosis

Since fractures can happen so easily in osteoporosis, you have to know what to do to limit damage to your body. Fractures in osteoporosis mostly occur in the hip, wrist, and spine, so these are the areas that you'll have to be careful not to damage. The bathroom can be a really dangerous place to slip and fall, leading to a fracture. Make sure you have a bath mat to add some traction to the tub when you stand in it, and you should also have grab bars. Your feet should be the first thing that you dry as soon as you're done in the shower or after a bath.

When you age, your bones become brittle and weak making you more susceptible to bone fractures. Learn who is at risk , the symptoms and how to prevent and treat osteoporosis.

fractures are caused by osteoporosis annually

an osteoporotic fracture every 3 SECONDS

1 _m **3** women over 50 will experience osteoporotic fractures

in 5 men over 50 will experience osteoporotic fractures

SYMPTOMS

Loss of Height

Stooped Posture

Bone Fracture

TREATMENTS

Alendronate (Fosamax)

Risedronate (Actonel, Atelvia)

Ibandronate (Boniva)

Zoledronic Acid (Reclast, Zometa)

Estrogen •

can help maintain bone density but can also increase a woman's risk of blood clots, endometrial cancer and breast cancer

has the same effect on bone density as
estrogen, without as many risks; may reduce
risk of certain types of breast cancer;
common side effects include hot flashes

Testoserone • can help increase bone density among men
